

Evaluate the *space*

Before you start planning your lighting, you should first get an overview and a feel for how you want to use the room in question. What do you need for this? Enough time, something to take notes with, and a little imagination.

The following topics should be answered in order to create a basis for your lighting plan.

- Type of project: Renovation - conversion - new build
- Function and utilisation of the rooms
- Current perception of light
- Location of the project & incidence of light
- Height of the rooms
- Type of ceilings - walls - floors
- Look & feel:
 - Design
 - Furniture
 - Materials
 - Colours
 - Art
- Wall decoration
- Desired control, dimming
- Schedule
- Budget

life is too short for boring lighting
